

Winlock Fixing Tab

If you need to get a screw fixing on your door lock or espagnolette bar but can't because there is fresh air behind the screw hole then the Winlock Fixing Tab is your solution.

It was originally designed to help where replacement door locks are being fitted and the routing detail is bigger than the replacement gearbox or hook box. This can mean the fixing screws either side of the gearbox/hookbox have fresh air behind them rather than material to pick up the screw thread. But it will work for any situation where a eurogroove fitted lock or espag has a void behind a fixing hole.

The Fixing tab can be clipped onto the lock or espag by using the so called "fir tree" which is a plastic clip that can be trimmed easily if needed so that it will still allow a drive bar to run behind the faceplate. The fixing tab is then set at 90' to the faceplate of the locking system so the material to the side of the eurogroove picks up the screw.

Easy and effective – the Winlock Fixing Tab is another innovation from Winlock.
