

This week the Winlock Special Spotlight falls on the unique Boa Concealed Friction Hinge Restrictor.

Like all Winlock Specials this is a UK manufactured product, exclusive to Winlock, that is made to the highest quality standards and is available ex-stock.

The Boa Concealed is a patented device that is designed to be retrofitted to any friction hinge with a standard track width. The Boa can be fitted in minutes and can either be installed as a temporary restrictor that can easily be removed or as a permanent restrictor which cannot be removed without a special tool.

The product is available in fixed sizes or as a one size cropable product, so that for every application the correct maximum opening can be achieved. It can be fitted to just one side of the window or both – again depending upon the application – so there is no need to stock restricted stays and even windows already installed on site can quickly and easily be converted to restricted windows.

The Boa Concealed is made in the UK with the bar made from the same grade of stainless steel as most frictions stays. The standard version requires no special tools to fit.

It is an ideal product for ensuring children cannot open a window any further than desired and is also an excellent additional security feature if fitted to windows that are vulnerable to a burglars attack. The householder can decide just how far the window should be opened.

Because it fits into the friction hinge the Boa Concealed is completely hidden and does not alter the aesthetics of the window at all.
